Experience

Druksys

Software Engineer • Contract, Remote

08/2021 - 11/2021

- Created and deployed web pages with React
- Modified and implemented javascript based code
- Assisted in the testing and coding of new features
- Supported the design and testing of the software, from design through integration
- Setup and managed database environment
- Developed React and Express scripts to translate data between applications

Personal Projects

[Robofriends](#)

In this application I'm fetching information from the robohash API. The UI is populated with some basic information about robots to implement the search feature. You can search for a robot and it will filter through til the one you're looking for comes up. This app is simple because the main focus was to learn how to use Redux.

[Ivy](#)

Ivy knows 5 emotions: sad, hurt, anxious, angry, and frustrated. She provides exercises to help someone manage those emotions. I used React and Reactbootstrap.

[Cookware Store](#)

I'm currently designing and building an API and database for an e-commerce website with another developer. I'm using NextJS and MongoDB. It's still in the building phase, it hasn't been deployed yet but you can see what has been done so far.
